

ONE INTELLIGENCE. MANY DOORS.

THE NAYA DESIGN CODE

BLACK GROUND. WHITE LIGHT. PURPLE SOUL.

A DESIGN CONTRACT IN THREE LANGUAGES

HUMAN / AI BUILDER / MACHINE-CHECKABLE

OCTOBER 8, 2026 • CONVERGENCE CANDIDATE

Existing Hub/Brain contracts remain authoritative pending governed review.

01 / THE ESSENCE

ONE SYSTEM

One Hub chassis and room socket. Every room is a distinct view of one governed intelligence. Never duplicate the brain, mail composer, contact record, or any canonical user action.

THE TRINITY

Black is the field. White is the readable light. Purple identifies Naya and major controls. Rich spectrum accents belong to meaningful objects - not global color floods.

THE EXPERIENCE

An invitation, not a menu of features. Every screen has a user job, an intelligible layout metaphor, accurate state, a real action and a graceful recovery path.

LIVING DEPTH

White-lit edges at rest. Physical elevation. Faceted jewel icons. Own-color glow on interaction. Restrained breathing motion; no fake liveness.

TRUTH BEFORE AESTHETICS

A demo stays labeled demo. Local state stays labeled local. A LIVE indicator requires live evidence. A beautiful but inert affordance is unfinished.

LEARNING IS BEHAVIOR

The rule is only mastered when a cold Naya makes the right interface choice from the canonical contract, without Shawn teaching it again.

THE ACCEPTANCE QUESTION

Does this interface make the user feel understood, serve a real need and help them act confidently - without explaining it twice?

02 / BRAND PHYSICS

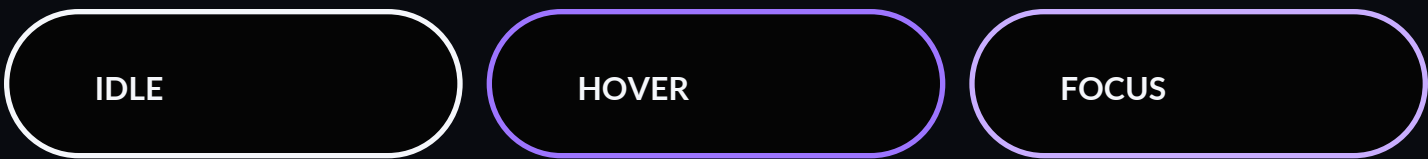

THE COLOR JOBS

	OBSIDIAN	FIELD: world and dominant canvas
	WHITE	LIGHT: primary typography and idle rims
	PURPLE	IDENTITY: primary chrome accent and Naya presence
	SPECTRUM	MEANING: per-object/room semantic jewel color

NATURAL SPECTRUM FLOW

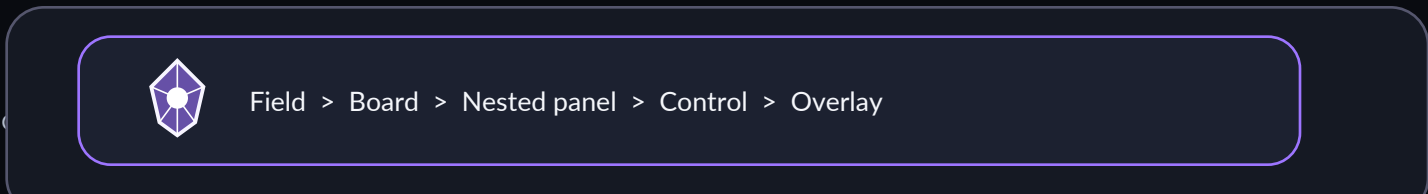

BUTTON PHYSICS / THREE OBSERVABLE STATES

Minimum 44px touch targets. Principal call to action: proposed ≥ 52 px. White icon/label, black core, visible idle rim, inset highlight, elevated shadow; focus and pressed states are not optional.

VISUAL ELEVATION

03 / DESIGN DEPARTMENTS

BRAND & ART

Logo, jewel mark, trinity and spectrum, warm editorial copy

DESIGN TOKENS

Colors, typography, spacing, depth, state, motion

LAYOUT & NAV

One shell, room socket, coherent routes, right UX metaphor

CONTROLS

Button physics, meaningful icons, focus, disabled and recovery

INTELLIGENCE

Four learning layers; evidence, context, provenance, voice

TRUTH & PRIVACY

Live vs demo vs local, permissions, no shadow brain

ACCESSIBILITY

18px candidate prose, 44px touch, zoom and reduced motion

FUNCTIONALITY

Every visible action has a real and authorized effect

QUALITY & PROOF

Rendered scoring, independent adversary, exact SHA parity

LEARNING & RETENTION

Distill errors; cold builder performs correctly next time

NO COMPETING CONTRACTS

Existing HUB/DESIGN-CONTRACT.md + BRAIN/10-INTERFACES/NAYA-DESIGN-CONTRACT-V1.md govern. This packet is a proposed compatible amendment and an acceptance specification; contradictory points remain HOLD until review.

04 / THE ROOMS AND JOBS

Hub / Feed	Know what matters; discover next useful action
Today	Understand priorities and recent meaningful learning
Spaces	Collaborate within permissioned contexts
Reports	Read sources, change over time, and clear next steps
Mail	Read, compose, and send messages only when authorized
Lists	Organize canonical objects without copying intelligence
Ledger	See real learning/outcomes/receipts; label simulations
Library	Retrieve applicable, source-bound intelligence
Smart Doors	Connect tools/agents; scope and revoke permissions
Connections	Know people; vertical relationships, no mail composer
Smart Grow	Consented contact sync, attributed invites, rewards
Welcome / Identity	Start simply, distinguish local profile and real auth
Ask Naya	Governed assistance; no competing shell
Notifications	Opt-in digest and honest in-app bell

IMPORTANT

Smart Connect is renamed Smart Doors. Smart Grow is a separate network growth room. The official live registry must be migrated via its owner; a design diagram is not proof of deployed navigation.

05 / 15 DESIGN LAWS

- 01 Score the lived render, not CSS.
- 02 Back it above 9 - or bench it.
- 03 Layout metaphor conveys meaning.
- 04 Chrome / text / object colors have different jobs.
- 05 White rim at rest; own color on interaction.
- 06 Black-core, white-voice, elevated real buttons.
- 07 Type creates hierarchy; readability wins.
- 08 Copy must invite, not document.
- 09 Icons are native vectors, not shrunken photos.
- 10 Maximum life, minimum noise.
- 11 One canonical implementation per capability.
- 12 Full usable width, top-left brand candidate.
- 13 Verify exact bytes before claims.
- 14 Every glyph promises a real behavior.
- 15 Every header is a warm front door.

The 15 laws are distilled from the Director-supplied Agent Briefing. Selected values may require alignment with previously ratified terms before machine enforcement.

06 / NO SILENT CONFLICTS

C01 ACTIVE STATE

Permanent glow vs existing white-only selected marker

C02 TYPOGRAPHY

18px always vs existing 16px floor; 14px detail role

C03 NAV & LOGO

Top-left directive vs centered-logo NAYA NAV previews

C04 PALETTE

Rose/amber legacy; smart-door/mail room accent decisions

C05 WIDTH

Full canvas vs readable inner text measure

C06 EDGE

1.5px+ interactive rim vs 1px noninteractive precision

C07 REGISTRY

11 legacy rooms vs Smart Grow and Smart Doors migration

C08 AUTHORITY

Uploaded Code candidate vs ratified/PR record

RESOLUTION RULE

Existing ratified/current contract governs until authorized reconciliation. Conflicts yield HOLD / UNKNOWN; machine automation must never install a guess as law.

07 / THE MACHINE TRIPWIRES

DETERMINISTIC STATIC CHECKS

Disabled zoom (M01) fails; old MAXIS URLs (M03) trigger review, with active links failing. Semantic control safety (M02) requires deeper DOM analysis. Machine contract contains fourteen rules with explicit evidence and uncertainty categories.

PROOF THAT STATIC CODE CANNOT PROVIDE

Visual luxury, readability at actual zoom, accurate live indicators, hidden authorization, real backend synchronization, performance, comprehension and 10/10 satisfaction require runtime + independent proof.

DRIFT DEFENSE

Source contract references + room-specific specs → lint/validation → browser journeys → independent visual inspection → exact-deployment parity → retained decision receipt → cold-builder regression.

MANDATORY FAILURE POSTURE

Hard check fails → do not ship. Conflicting authority → HOLD. Missing evidence → UNKNOWN. No rounding up subjective score or letting a high beauty score override security/accessibility.

STATIC SOURCE SNAPSHOT: NINE NEW UPLOADS

M03 old app URL matched in 7/9 HTML files (source text); this is a flag for investigation, not proof of a visible active link.

M01 did not flag zoom restrictions in these nine snapshots; earlier entry/identity uploads differed.

08 / THE RELEASE CONTRACT

01 SOURCE

Reconcile owner, canonical main, exact route, version and ratified law.

02 SPEC

State user goal, room job, contract tokens, states, data/provenance.

03 STATIC

Run machine rules. Fail hard violations. Record unknowns.

04 RENDER

Desktop + mobile + zoom + keyboard + focus + reduced motion.

05 REAL

Test happy/error/empty/unauthorized paths and real backend effects.

06 INDEPENDENT

Reviewer challenges claims and scores the actual rendered page.

07 RELEASE

Governed SHA parity, authority gate, no silent red CI.

08 LEARN

Preserve essence, Smart Note candidate, cold successor uses it correctly.

TARGET: VISUAL D1 = 10; D2-D8 >= 9.5; EVERY HARD GATE PASSES.

09 / THE NEXT MOVE

NO SECOND LAW. NO SECOND BRAIN. NO SECOND SHELL.

The right deliverable is a candidate amendment to the existing canonical contract, reviewed through Naya 2's interface lane and the governance pipeline. The PDF, AI instructions, and machine data are synchronized projections of one proposed meaning.

1 REVIEW

Compare C01–C08 against current ratified law. Human Director rules on actual design-law changes; do not silently resolve them.

2 IMPLEMENT

Convert approved machine assertions into existing CI in the canonical Hub architecture. No unapproved auto-promotion or deployment.

3 TEST

Have a cold Naya build a brand-consistent, functional and accessible room without being reminded. Independently falsify.

4 COMPOUND

Retain the smallest lesson, exact tests and outcomes so the next worker reuses it automatically.

CURRENT HONEST STATUS

DOCS AUTHORED • STATIC PREFLIGHT RUN • GITHUB/PRODUCTION ENFORCEMENT NOT YET PROVEN • CANDIDATE AWAITING REVIEW.
