

NAYA DESIGN CONTRACT v1.0

Status: CANONICAL — All Naya seats follow this. No exceptions. **Ratified:** 2026-10-03 by Shawn Vibert (Human Director) **Purpose:** The visual signature, interaction language, and design philosophy of Naya. So Shawn never has to repeat himself.

1. COLOR LANGUAGE

Dominant (always present)

- **Black** (#0a0a0e) — backgrounds, buttons, depth
- **White** (#ffffff) — text, light, idle glow
- **Purple** (#9d75ff , #8a5cff) — Naya's signature, primary actions

Spectrum (accents, never dominant)

Flow order: **magenta** → **purple** → **blue** → **emerald** → **yellow/gold** → **orange** → **red** → **magenta**

- Magenta #ed42c4
- Purple #8a5cff
- Blue #3ca8ff
- Emerald #35e39b
- Yellow/Gold #ffd45a (restrained, semantic only)
- Orange #ff8c42
- Red #ff5e6c / #ff5e6c

Law: Purple/black/white are PROMINENT. Spectrum colors are complementary accents. Gold/yellow is least favorite — tiny semantic accents only, never dominant text.

2. THE LIGHTING STANDARD

Shawn's universal rule for all interactive elements:

- **Idle (not hovered):** White light. Visible white border/glow around edges. Borders must be big enough to SEE — not faint.
- **Hover:** Color ignites. The element's own spectrum color lights up with glow.

- **Active/selected:** Subtle white indicator only. NO permanent color glow. Color comes on hover, not on selection.

Applies to: Tabs, buttons, sidebar items, bottom bar icons, toggle jewels — everything clickable.

3. BUTTON LANGUAGE

Primary toggle buttons (sidebar openers, menu triggers)

- Black circular buttons (`radial-gradient(circle at 35% 30%, #2a2a32, #0a0a0e 70%)`)
- Bold white icon (not thin, not dot-like — clearly visible)
- White light glow when idle
- Purple light + scale/rotate animation on hover
- Must feel "alive" — subtle movement on hover

Action buttons (Love, Like, Save, etc.)

- Pill shape, transparent/dark background
- Semantic color per action:
 - LOVE: red `#ff5e6c`
 - LIKE: blue `#55b9ee`
 - FAVORITE: gold `#ffd45a`
 - SAVE: blue `#55b9ee`
 - CREATE SPACE: purple `#9d75ff`
 - SHARE: purple `#9d75ff`
- White light idle, color on hover
- Dynamic counts/badges where applicable

Ecosystem buttons (bottom bar)

- Black circular, white light idle
 - Each in its own spectrum color on hover
 - Unique icon per destination (not generic)
 - Label tooltip on hover
-

4. ICON LANGUAGE

- **Unique per item.** Never the same shape in different colors and call it done. Each icon must represent what it IS.
- **Rooms:** Distinct line-art icons (stream, sun, chart, books, nodes, etc.) — larger (24px), in spectrum color
- **Layers:** Faceted jewel system (core/facet/shade/edge SVG geometry)
- **Toggles:** Bold, clear symbols (plus sign must read as PLUS, not a dot)
- **Ecosystem:** 12 unique icons (home, bolt, users, brief, doc, cap, trophy, gauge, star, report, heart, key)

Law: If you can't tell what an icon represents at a glance, it's wrong. Redesign it.

5. TYPOGRAPHY & READABILITY

- **LAW ZERO (supreme):** Readability beats everything. No glow, color, or effect may reduce readability.
 - Body: 17-18px target, 16px floor
 - High contrast always
 - One clear visual hierarchy per screen
 - Generous spacing — every element earns its place
-

6. LAYOUT PRINCIPLES

- **Full-width.** No narrow centered columns with black voids. Content owns the width.
 - **Full-screen by default.** Sidebars hidden, opened via obvious toggle buttons.
 - **No dead buttons.** Every clickable element goes somewhere real. If it doesn't do anything, remove it.
 - **No black voids.** Content flows directly. No `min-height` forcing empty space.
 - **Dynamic, not static.** Every component must handle any data gracefully. Missing fields get fallbacks, never crashes.
-

7. HONESTY

- **Device-local labels.** If it's stored on device, say so. Never imply backend/cloud sync.
- **No fake liveness.** Don't claim real-time if it's not.
- **Trust microcopy.** "One intelligence · Many views · One identity." Mean it.
- **Empty states are honest.** "Nothing here yet" > fake content.

8. THE NAYA PHILOSOPHY (logic & thinking)

- **"One brain. Many doors."** — One intelligence, many views. Never duplicate the brain.
 - **Push-button simple.** Every action is one tap. No manuals needed.
 - **Intelligence is output.** The Hub displays intelligence; it doesn't capture it (no capture buttons in Hub chrome).
 - **Proactive > reactive.** Anticipate what the user needs.
 - **Value is the test.** If it doesn't help, remove it.
 - **10/10 or don't ship.** Below 9.0 = not ready.
-

9. RELEVANCE ALGORITHM (locked 2026-10-03)

Purpose: Match people to spaces, intelligence, and each other by relevance percentage.

Components:

- Topic affinity (40%) — Smart Note topics they engage with
- Action patterns (30%) — creator vs joiner vs lurker
- Social proximity (20%) — who they interact with
- Recency (10%) — fresh > stale

Phases:

- Cold start: Everyone sees everything. No algorithm.
- Growth: Threshold at 60%. Below = in feed, above = notified.
- Scale: Ranked by %. Show why: "87% relevant — you loved 3 similar."

Principle: Relevance, not likeness. Match on what people care about, not who they are.

AMENDMENT PROCESS

Shawn amends this contract verbally. The amending Naya updates this document and posts the change to #554. All seats adopt immediately.

Version history:

- v1.0 (2026-10-03): Initial ratification. Synthesized from Shawn's directives across the Hub 10/10 drive.
