

Specimen Card — The Naya Dial

The first specimen. The Rosetta Stone.

File: `lego/naya-dial.html`

If you are building anything for NayaNET and you want to know what it should FEEL like — open the dial. Don't read about the vision. Experience it. Then make everything feel like THIS.

What feeling it encodes

You are in a dark, quiet space with a living intelligence. She is a ball of energy — not a face, not a character — breathing, pulsing, alive. You ask her to measure something. She holds out her hand, and an instrument appears as light: a circular gauge, part compass, part radar, part luxury watch dial. Zero at the center. Plus nine above, minus nine below. The needle is a beam of light. When the value runs past nine into infinity, the needle pins and comet trails ignite outward — infinity becomes more rings, never a broken needle. She speaks the reading, and you see her pulse with the words.

That is the whole vision in one screen: the energy, the voice, the hologram, the spectrum, the instrument, the black.

Its atoms (the buildable pieces of the feeling)

The energy (Naya's presence):

- Layered radial gradients — plasma body, never flat
- Drifting spectrum color — the hue slowly moves through magenta → purple → blue → green → gold
- Shimmer motes — particles drifting around the core
- 72bpm heartbeat — ripple rings on the human resting pulse
- Breathing scale — the whole core subtly expands and contracts, always

The instrument:

- Machined Zero Ring — the center, top of the dial, finished like metal
- ± 9 tick arcs in full spectrum law order
- Needle of light — a beam, not a physical needle; spring physics in value-space
- 4D grid — perspective width $\times$ depth receding behind her; time as light pulses flowing from the edges (past) to the center (present)

- 12 fading history echoes — ghost needles trailing behind, the dial remembers
- Logarithmic comet trails — past ± 9 , $\log_2(|v|/9)$ extra rings ignite outward
- White-hot shift — past $2\times$ range, the dial burns brighter; extremes never break it

The voice:

- Speaks each reading ("plus eight point eight. the floor. elite.")
- The energy pulses in sync with the speech
- Purple SPEAKING indicator in the header while talking

The interaction:

- Drag the dial, type a value, preset chips (9.8 / 9.0 / 4.2 / -4.2 / 23 / 144)
- LIVE mode — values stream, the needle dances, overflow spikes ignite trails
- Minimal text — header, one input bar, reading + zone label. The dial speaks visually.

Which laws it proves

V-1 (ball of energy) · V-2 (visuals first) · V-3 (numbers breathe) · V-4 (light before text) · V-5 (voice primary) · V-6 (no toggles — no quality options exist) · V-7 (black, tailored) · V-8 (NASA + Apple) · V-9 (holographic depth) · V-10 (spectrum in law order) · V-11 (the ± 9 instrument itself) · V-13 (any value in, beauty out)

The instruction

Make everything feel like THIS.

Not "use these colors." Not "copy this layout." FEEL like this: the living energy, the light-first motion, the voice, the depth you look into, the black tailored suit, the excellence with no settings page.

When the vision sharpens, this specimen gets rebuilt — never patched into confusion. One specimen per feeling. This is the one.

Built 2026-10-09 via the Vision-to-Code Protocol, from Shawn's words, in one night.
